

Security Teams Are Drowning in Data and Paperwork

158 days

Avg. time to identify a breach (IBM, 2025)

20–40 min

Typical analyst orientation time

2–4 hrs

Time spent on a single pentest report

\$4.88M

Avg. cost of a data breach in 2024

Two compounding problems define the modern security team's daily reality. For **SOC analysts**, every investigation begins by manually scrolling through thousands of raw JSON log entries. For **penetration testers**, reconstructing a complete, accurate timeline from memory takes hours. The expertise exists. The documentation infrastructure does not.

One Extension. Two Tools. Zero Workflow Change.

A self-hosted browser extension overlaid on Wazuh, powered by a locally deployed Small Language Model. All processing on internal infrastructure. No data leaves the network.

Log Analyzer

- 1 Filter** — Analyst applies time range and filters natively in the Wazuh dashboard
- 2 Capture** — One click. Extension grabs the active URL and sends filter parameters to the backend
- 3 Report** — Backend queries Wazuh, pre-processes logs, SLM generates a structured Markdown report

Pentest Reporter

- 1 Start** — Tester clicks Start. Session begins, timestamp recorded
- 2 Confirm** — As attacks are executed, tester taps the attack dropdown: once for Attempted, twice for Confirmed
- 3 Report** — At session end, all confirmations + Wazuh telemetry sent to backend. SLM generates the full report

CONFIDENCE SCORE: 98%

Logprob-derived confidence score — a mathematically honest uncertainty signal.

Built for the People Who Actually Do the Work

L1/L2 SOC Analyst

Filter suspicious windows in Wazuh and click Capture. In seconds, a structured report provides hypotheses, concrete findings, and remediation steps—each with a confidence badge.

Penetration Tester

No need to stop for notes. Tap the dropdown to confirm attacks mid-engagement. At the end, the full report and coverage matrix are ready for compliance-ready export.

Red Team Lead / MSSP

Ensure consistent report quality across all testers. Structured, timestamped reports corroborated by Wazuh telemetry provide audit evidence without extra effort.

Security Manager / CISO

Classify the tool as a decision-support aid. AI findings are explicitly labeled with confidence scores and tester sign-off trails, lowering compliance burdens.

The Gap Nobody Has Filled

Feature	Existing SIEM AI	Agentic Pentest	AI Report Assistants	This Product
Workflow Change	High — new query interface	High — new toolchain	Medium — manual export	None
Control	Partially AI-driven	Yes — AI leads	No — Manual	No — Human leads
Accuracy	AI-inferred	AI-generated	Memory-reconstructed	Tester-confirmed
Confidence Signal	None	None	None	Token logprob
Data Privacy	Cloud AI (Exfiltration)	Often Cloud	Often Cloud	Never leaves network
Cost Model	Per-seat SaaS	Per-seat SaaS	Per-seat SaaS	Fixed hardware

Manual testing uncovers nearly **2,000× more unique vulnerabilities** than automated scans. Human-led work is irreplaceable.

(Astra Security, 2024)

The pentest market is growing at **17.1% CAGR**, projected to reach **\$3.9 billion by 2029**.

(MarketsandMarkets, 2025)

The Architecture Is Decided. The Build Starts with Validation.
